All tree work is to be undertaken in accordance with British Standard BS 3998:2010 Tree work - Recommendations.
All animals are to be removed and the site is to be left as found.
Care is to be taken of the ground around retained trees to make sure that it does not become compacted as a result of tree surgery operations. No equipment or vehicles such as timber lorries, tractors, excavators or cranes shall be parked or driven beneath the crowns of any retained trees, to prevent subsequent compaction and root death.

Sheet 1

Note: No unauthorised excavations are to be carried out within the RPAs of any retained trees. Any level changes must form part of a construction method statement & must protect the rooting environments of all retained trees.

Issue: Proposed hard surfacing is partially situated within RPA of group G08
Solution: Excavations for the hard surfacing within the RPA are to be carried out under arboricultural supervision.

Issue: Proposed reinforced cellular grass is partially situated within RPA of tree T78.
Solution: Excavations for the surfacing within the RPA are to be carried out under arboricultural supervision.

Issue: Proposed hard surfacing replacement is situated within RPAs of trees & groups.
Solution: Proposed resurfacing is to be designed so that it can be constructed entirely above the existing soil level and the existing sub-base is retained.

Tree Categories	
Trees are categorised in accordance with the cascade chart in Table 1 of the British Standard BS 5837:2012 'Trees in relation to design, demolition and construction - Recommendations'	
Category 'U' - Trees in such condition that they cannot realistically be retained as living trees in context of the current land use for longer than 10 years.	
Category 'V' - Trees of high quality with an estimated remaining life expectancy of at least 40 years.	
Category 'W' - Trees of moderate quality with an estimated remaining life expectancy of at least 20 years.	
Category 'X' - Trees of low quality with an estimated remaining life expectancy of at least 10 years, or young trees with a stem diameter below 150mm.	

Root Protection Area	
In order to avoid damage to the roots or rooting environment of retained trees, the Root Protection Area (RPA) should be defined around each of the category 'U', 'V' and 'W' trees. This is a minimum area in which should be retained and undisturbed around each retained tree.	
The RPA is calculated using the British Standard BS 5837:2012 'Trees in relation to design, demolition and construction - Recommendations'.	
The calculated RPA is capped to 707m ² , which is the equivalent to a circle with a radius of 15m. Where there appears to be restrictions on root growth the root protection area is reshaped to more accurately reflect the likely distribution of the roots.
