Description of the Proposal

Please note in regard to:

- **Fire Statements** - From 1 August 2021, planning applications for buildings of over 18 metres (or 7 stories) tall containing more than one dwelling will require a 'Fire Statement' for the application to be considered valid. There are some exemptions. [View government planning guidance on fire statements](#) or [access the fire statement template and guidance](#).
- **Permission In Principle** - If you are applying for Technical Details Consent on a site that has been granted Permission In Principle, please include the relevant details in the description below.
- **Public Service Infrastructure** - From 1 August 2021, applications for certain public service infrastructure developments will be eligible for faster determination timeframes. See help for further details or [view government planning guidance on determination periods](#).

Please describe the activities and processes which would be carried out on the site and the end products including plant, ventilation or air conditioning. Please include the type of machinery which may be installed on site:

The manufacture of composite structural insulated panels (SIPs) servicing the housing, leisure and commercial construction industries. Utilising a two component polyurethane (PU) foam system which is injected into a mould to form a core material that is faced by orientated strand board (OSB) the SIPs can form both the wall and roofing elements of constructions that require a high thermal and air tightness performance characteristics.

From two separate storage tanks the PU components are fed via a high pressure injection machine feed into three separate mould presses which contain the PU during its expansion within the manufacturing cycle. Additional conveyors facilitate the movement of the product around the production cell culminating in a automated wrapping system. The polyurethane core consists of two separate components which are kept separate, in a fully closed loop system, until the point of mixing and injecting into the mould cavities within the press. Any vapours emitted during this mixing phase are extracted by LEV to the building exterior. All levels of vapours are regularly monitored to ensure compliance with Process Guidance note 6/29
