

Kindling Farm
Plant Raising Tunnel Materials Specification
Ref: PP-12692048 30th January 2025

The polytunnel will be constructed using galvanised steel tubes.

The vast majority of the frame will be covered in Super Therm Polythene (200 Micron) allowing 90% light transmission through but diffused. This will be purchased from First tunnels and is the standard material used in polytunnel construction. It will match the colour of the polytunnel we have planning permission for.

Along the north and south sides will be a 1m tall ventilation side, consisting of green knitted monofilament netting.

Both ends will have a wooden frame and doors and covered in the same polythene sheet.
