Subject: St Chads

I have also had a few questions from the planner taking care of the application at Unit 6, St Chads. Some I have information for but the more specialist questions I will need a response from either yourself, the machine manufacturer or Rowlands.

Material Specification

- Provide details of the proposed materials and specify colours. **Plywood infill in white.**
- The elevational drawings indicate that there would be a vinyl window

covering, however no detail of this has been provided. **Plain white vinyl**

- Identify whether there would be any logos etc on the unit frontage or as detailed on the drawings. **As drawings**

Supporting Statement

- The detail indicates that the unit opening from the ground would be 310 mm. However, the elevational drawing indicates that the unit would be set at ground level. If this reference to 'the opening' relates to the collection draw height, this is indicated on the elevational drawings at a height of 460mm. Please clarify and amend accordingly. **I assume you have done this.**

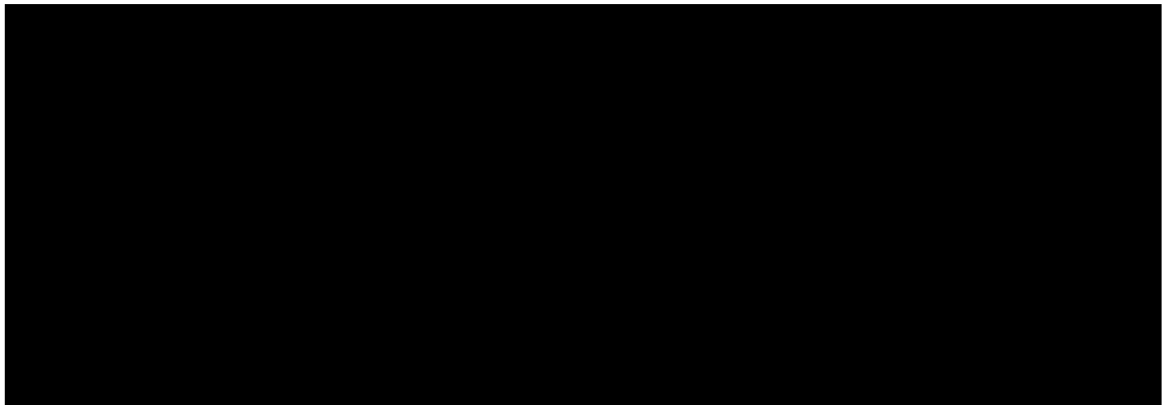

Operational Requirements:

- Please provide detail of the intended operation:
- Hours of use – is it intended to be 24 hours 7 days a week outside of the opening hours of the pharmacy? **Yes 24/7**

- Will the type of prescription be restricted to specific classification of controlled drugs?
Non CD's only (pharmacy medicines)

Lighting/Security

- Please provide detail of how the unit would be lit. **You have this on the machine information sheet I sent originally**
- Are there any other security measures in place such as existing CCTV on the premises? **Yes CCTV and monitored alarm**

Optimising Spaces
Liverpool - London - Bath
