Remember to periodically save your work.

Click the "Main Menu" button. The Worksheet Menu will then open like this.

The next steps explain how to enter the key data for your project.

BETA

Scroll right and fill in all remaining "white" columns. Complete a new row for every habitat parcel found on site.
When you have finished entering all the site baseline data scroll left and click the "Main menu" button.

BETA

as appropriate. You will need to complete a new row for each habitat parcel on-site.

Image shows the habitat creation screen.

When you have finished entering data click the "Main menu" Button in the top left of the screen to return to the worksheet menu.

Complete the "On-site habitat enhancement" and "On-site habitat accelerated succession" if needed by clicking the buttons and filling in the white columns.

When finished return to the "Main menu".

If you are seeking to achieve a biodivers
data input is needed. You can now skip

and habitat enhancement/creation data. This data can be entered using the green buttons highlighted under points 3 and 4 of the tool.

Off-site data should be entered into the white columns on each of the off-site sheets.

When entering data scroll right on the screen to ensure that all white data entry fields are completed. Complete a new row for each habitat type found off-site.

When all "off-site" data has been entered click on the 'main menu' button.

Step 4: Hedgerows, Lines

If your project contains hedgerows, lines of trees or rivers, streams and watercourses then you will need to fill in the additional metric modules for these habitats. They are separate from the main metric as each uses a slightly different calculation.

BETA

inputting data into the white columns.

Step 5: T

Click on the "Results" to see whether or not your project has achieved a forecast net biodiversity gain.

On this screen you can click to see the "headline results", "detailed results" or the 'habitat trading summary'. In most circumstances only the 'headline' or 'detailed' results will be needed.

The "headline results" page provides a breakdown of the biodiversity units lost and gained and the percentage loss or gain achieved in biodiversity units.

For more detailed results click the "Detailed Results" button.

Step 6: Saving and Sul

Go to save as and save the document a

project title.

Street Tree Helper

The calculation tool also comes with a street tree helper to quickly convert your street tree measurements into an area calculation to use when calculating baseline and post-intervention values fo street trees. Enter the number of trees o each size type and the tool will convert this into hectares.

Technical Data

Information about all of the technical dat that underpins the calculation tool can b found by clicking the "Technical data" button on the main menu

There is also a **conversion tool** embedded into the technical data sectio to allow for easy conversion between Phase1 and UKHab classifications.

Poor semi-improved grassland in the north of the Outline Development Zone (TN12), now subject to RM application. Low species diversity and heavy grazing, therefore allocated poor condition.
Several areas of modified neutral grassland (grassland which has developed on disturbed ground as opposed to pasture) with good species diversity (e.g. TN1) within the Outline Development Zone which is now subject to RM application. Wildflowers/sedges <30%, perennial ryegrass <25%, cover of undesirable species is 5-15% (scrub encroachment), therefore allocated moderate condition. Two areas of semi-improved neutral grassland (TN11 and TN18) in the north and west of the Outline Development Zone which is now subject to RM application. Wildflowers/sedges <30%, perennial ryegrass <25%, cover of undesirable species is 5-15% (scrub encroachment), therefore allocated moderate condition.

Within Grassland Core Biodiversity Area therefore awarded high strategic significance.

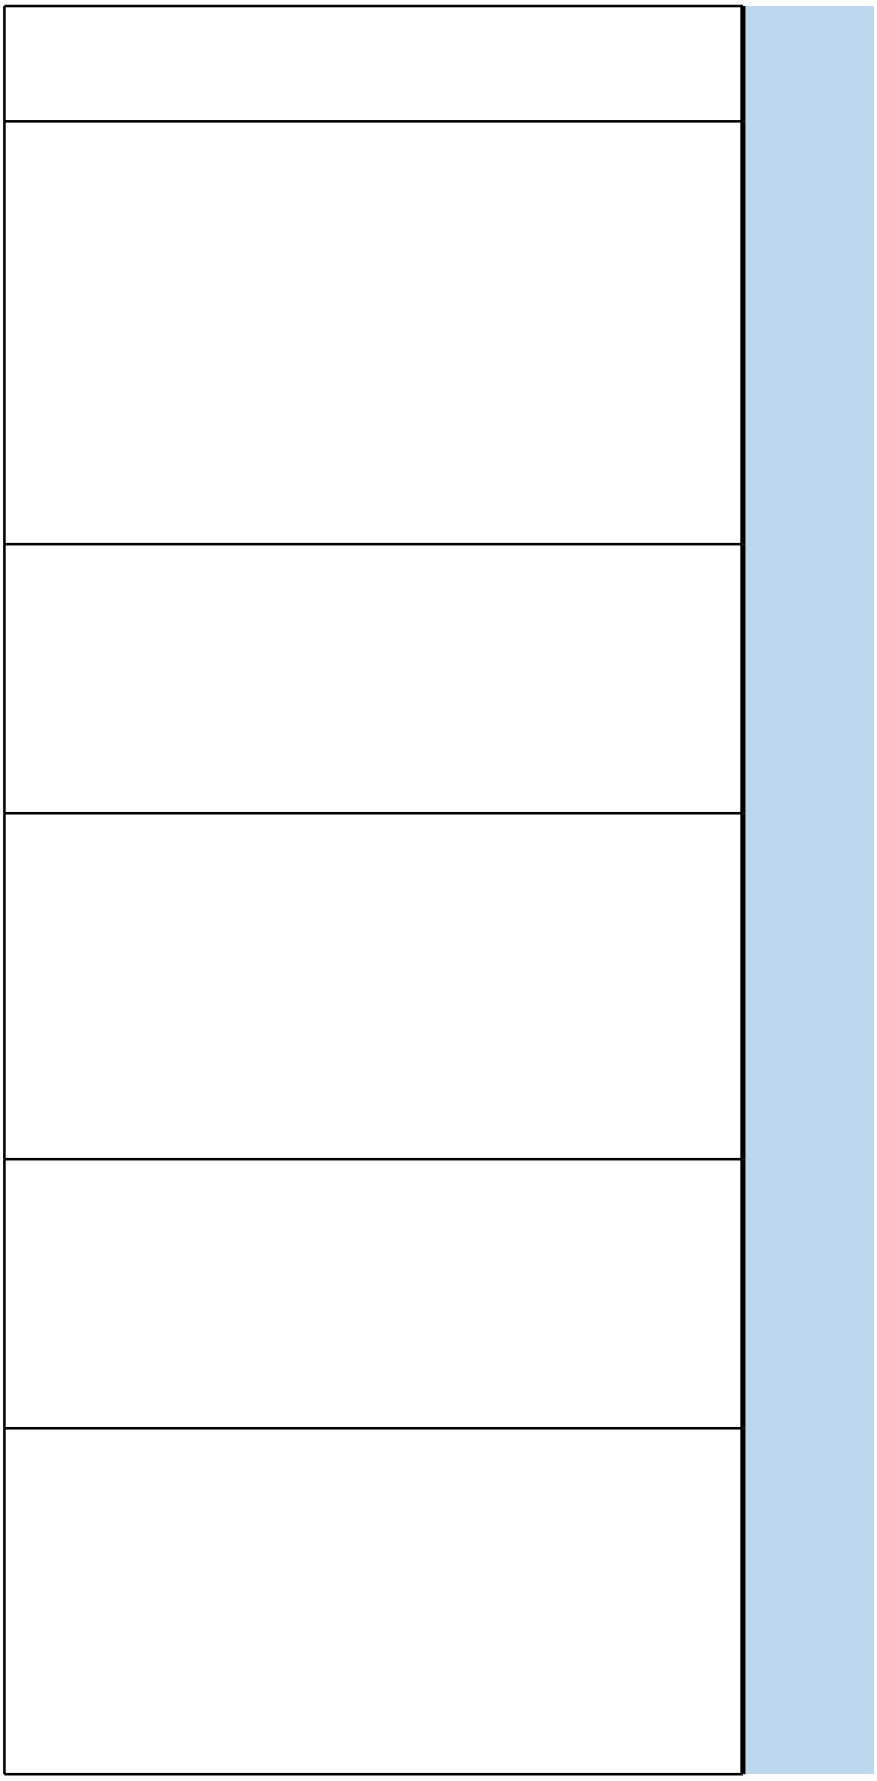

Marshy grassland with encroaching scrub in central area of the Outline Development Zone which is now subject to RM application, mapped as Mosaic C in the Phase 1 habitat survey (TN15). High level of tree/scrub encroachment leads to allocation of poor condition. Neutral grassland with encroaching scrub in the central area of the Outline Development Zone which is now subject to RM application, mapped as Mosaic D in the Phase 1 habitat survey (TN5). HIgh level of tree/scrub encroachment leads to allocation of poor condition.

HIgh level of tree/scrub encroachment leads to allocation of poor condition. Within Grassland Core Biodiversity Area therefore awarded high strategic significance.
Several areas of scrub habitats across the Outline Development Zone which is now subject to RM application, predominantly willow species, with some patches of bramble. Lack glades and species diversity therefore allocated moderate condition.
Former arable field, within Outline Development Zone which is now subject to RM application, now unmanaged and supporting scattered tall ruderal herbs inclusing thistles, ragwort and willowherbs. Allocated poor condition. One main area of tall herb vegetation (TN19), dominated by great willowherb, in the south and a number of smaller patches in the Outline Development Zone which is now subject to RM application. Fails most of criteria of relevant condition assessment and therefore allocated poor condition.
Area subject to earthworks as part of RM2 and therefore allocated as artifical unvegetated, unselaed surface.
Bare ground on tracks through the area and some bare areas of colliery spoil mainly in the south of the Outline Development Zone which is now subject to RM application. Allocated poor condition due to lack of vegetation.

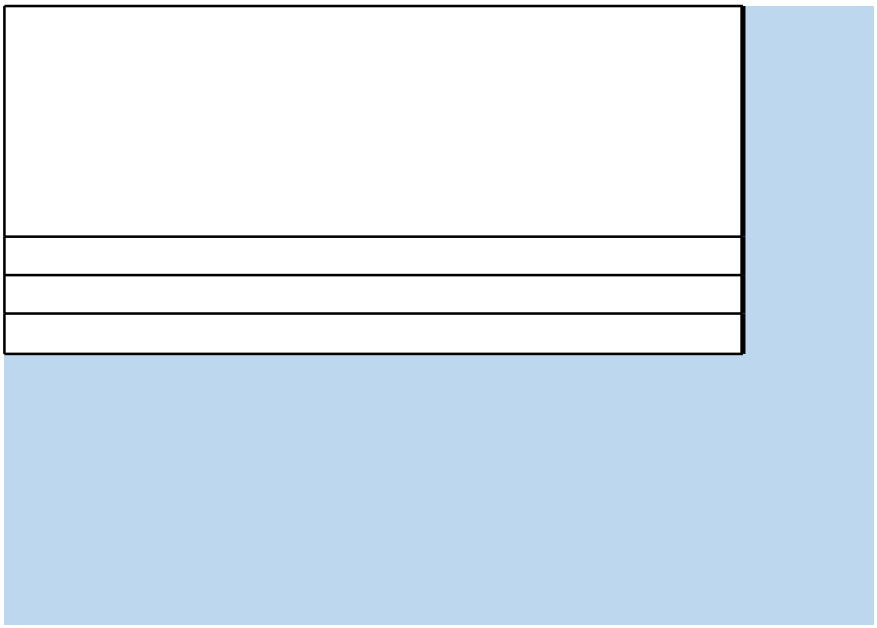

Small area of hardstanding associated with road infrastructure within the Outline Development Zone, which is now subject to RM application.
Semi-natural broad-leaved woodland (mature, naturalised plantation)(TN17) in the south of the Outline Development Zone which is now subject to RM application, remnant of the Halsnead Estate. Limited age structure, species diversity and presence of deadwood, which is subject to enhancement to good condition as a result of RM2 and therefore this is taken as the baseline for this RM3 application to avoid double counting. This area falls within the Woodland Core Biodiversity Area therefore awarded therefore awarded high strategic significance.
Semi-natural broad-leaved woodland (mature, naturalised plantation)(TN10) in the north of the Outline Development Zone which is now subject to RM application, remnant of the Halsnead Estate. Limited age structure, species diversity and occasional presence of invasive species, therefore allocated moderate condition.
Semi-natural broad-leaved woodland (mature, naturalised plantation)(TN10) in the north of the Outline Development Zone which is now subject to RM application, remnant of the Halsnead Estate. Limited age structure, species diversity and occasional presence of invasive species, therefore allocated moderate condition. This area falls within the Woodland Core Biodiversity Area therefore awarded therefore awarded high strategic significance.
Remainder of plantation broad-leaved woodland in southern area of the Outline Development Zone which is now subject to RM3 application, approximately 20 years old (TN16) with similar age structure, very dense in places but with some recruitment evident and occasional deadwood. Therefore allocated moderate condition.
Semi-natural broad-leaved woodland (mature, naturalised plantation)(TN17) in the south of the Outline Development Zone which is now subject to RM application, remnant of the Halsnead Estate. Limited age structure, species diversity and presence of deadwood, therefore allocated moderate condition. This area falls within the Woodland Core Biodiversity Area therefore awarded therefore awarded high strategic significance.

While the Metric 2.0 tree calculator gives an area of 0.0226ha for 2 large, moderate condition oak trees in the north of the site, in recognition of the increased value attributed to trees in more recent metrics, the area for these trees has been calculated using the Statutory Metric tree calculator.

Native shrub mix including blackthorn, hawthorn, dog rose, hazel, bird cherry, dogwood, guelder rose and goat willow. Targeted at moderate condition as the area is not large enough for the creation of glades, a requirement for achieving good condition. Does not fall within any relevant Core Biodiversity Area, therefore awarded low strategic significance.

Built development, including buildings, roads, parking and pavements	
Ornamental shrub planting. Poor condition targeted.	
Bare ground underneath hedgerows to account for difference between area of hedgerow shown in CAD and linear hedgerow measure for the metric. Poor condition as will be predominantly bare earth with little vegetation growth.	
Remediation mix woodland planting (to include rowan, birch species, willow species, English oak, blackthorn and hawthorn) and ground flora plug planting (to include bluebell, red campion, herb-Robert, wood avens, dog's mercury, foxglove, primrose, wood millet, false brome, broad buckler-fern and hart's tongue) targeted at moderate condition which is achieveable within 30 years. Not within Woodland Core Biodiversity Area therefore awarded low strategic significance.	

Predominantly native woodland mix in area adjacent to Old Halsnead to provide screening (to include English oak, western hemlock, hazel, hornbeam, holly, Scot's pine, hawthorn, small-leaved lime and rowan) targeted at moderate condition which is achieveable within 30 years. Not within Woodland Core Biodiversity Area therefore awarded low strategic significance.

Native species-rich hedgerow including hawthorn, field maple, hazel, blackthorn, holly and dog rose, planted adjacent to built environment and therefore likely to only achieve moderate condition over 30 years.	
Native species-rich hedgerow including hawthorn, field maple, hazel, blackthorn, holly and dog rose. Over 30 years it will be possible to achieve all criteria and therefore can be expected to achieve good condition.
