Dear Jonathan

**Planning Application for New Secondary School – Naylor's Road (Application ref: 21/00398/FUL)
Storm Water Connection**

I write further to our recent discussion in respect of the Witherslack Groups planning application to construct a new secondary school on land adjacent to the existing primary school.

I confirm that following review that I do not consent to the surface water generated from the adjacent development site connecting to the existing fishing lake on the existing primary school site. However, I would be agreeable, in principle, and subject to verification of the proposed design by my own consultants, to a new independent surface water drain that would serve the adjacent development site being installed through the existing primary school site to an existing surface water connection point.

Yours sincerely

Charles Mills
