2. SPECIFICATION

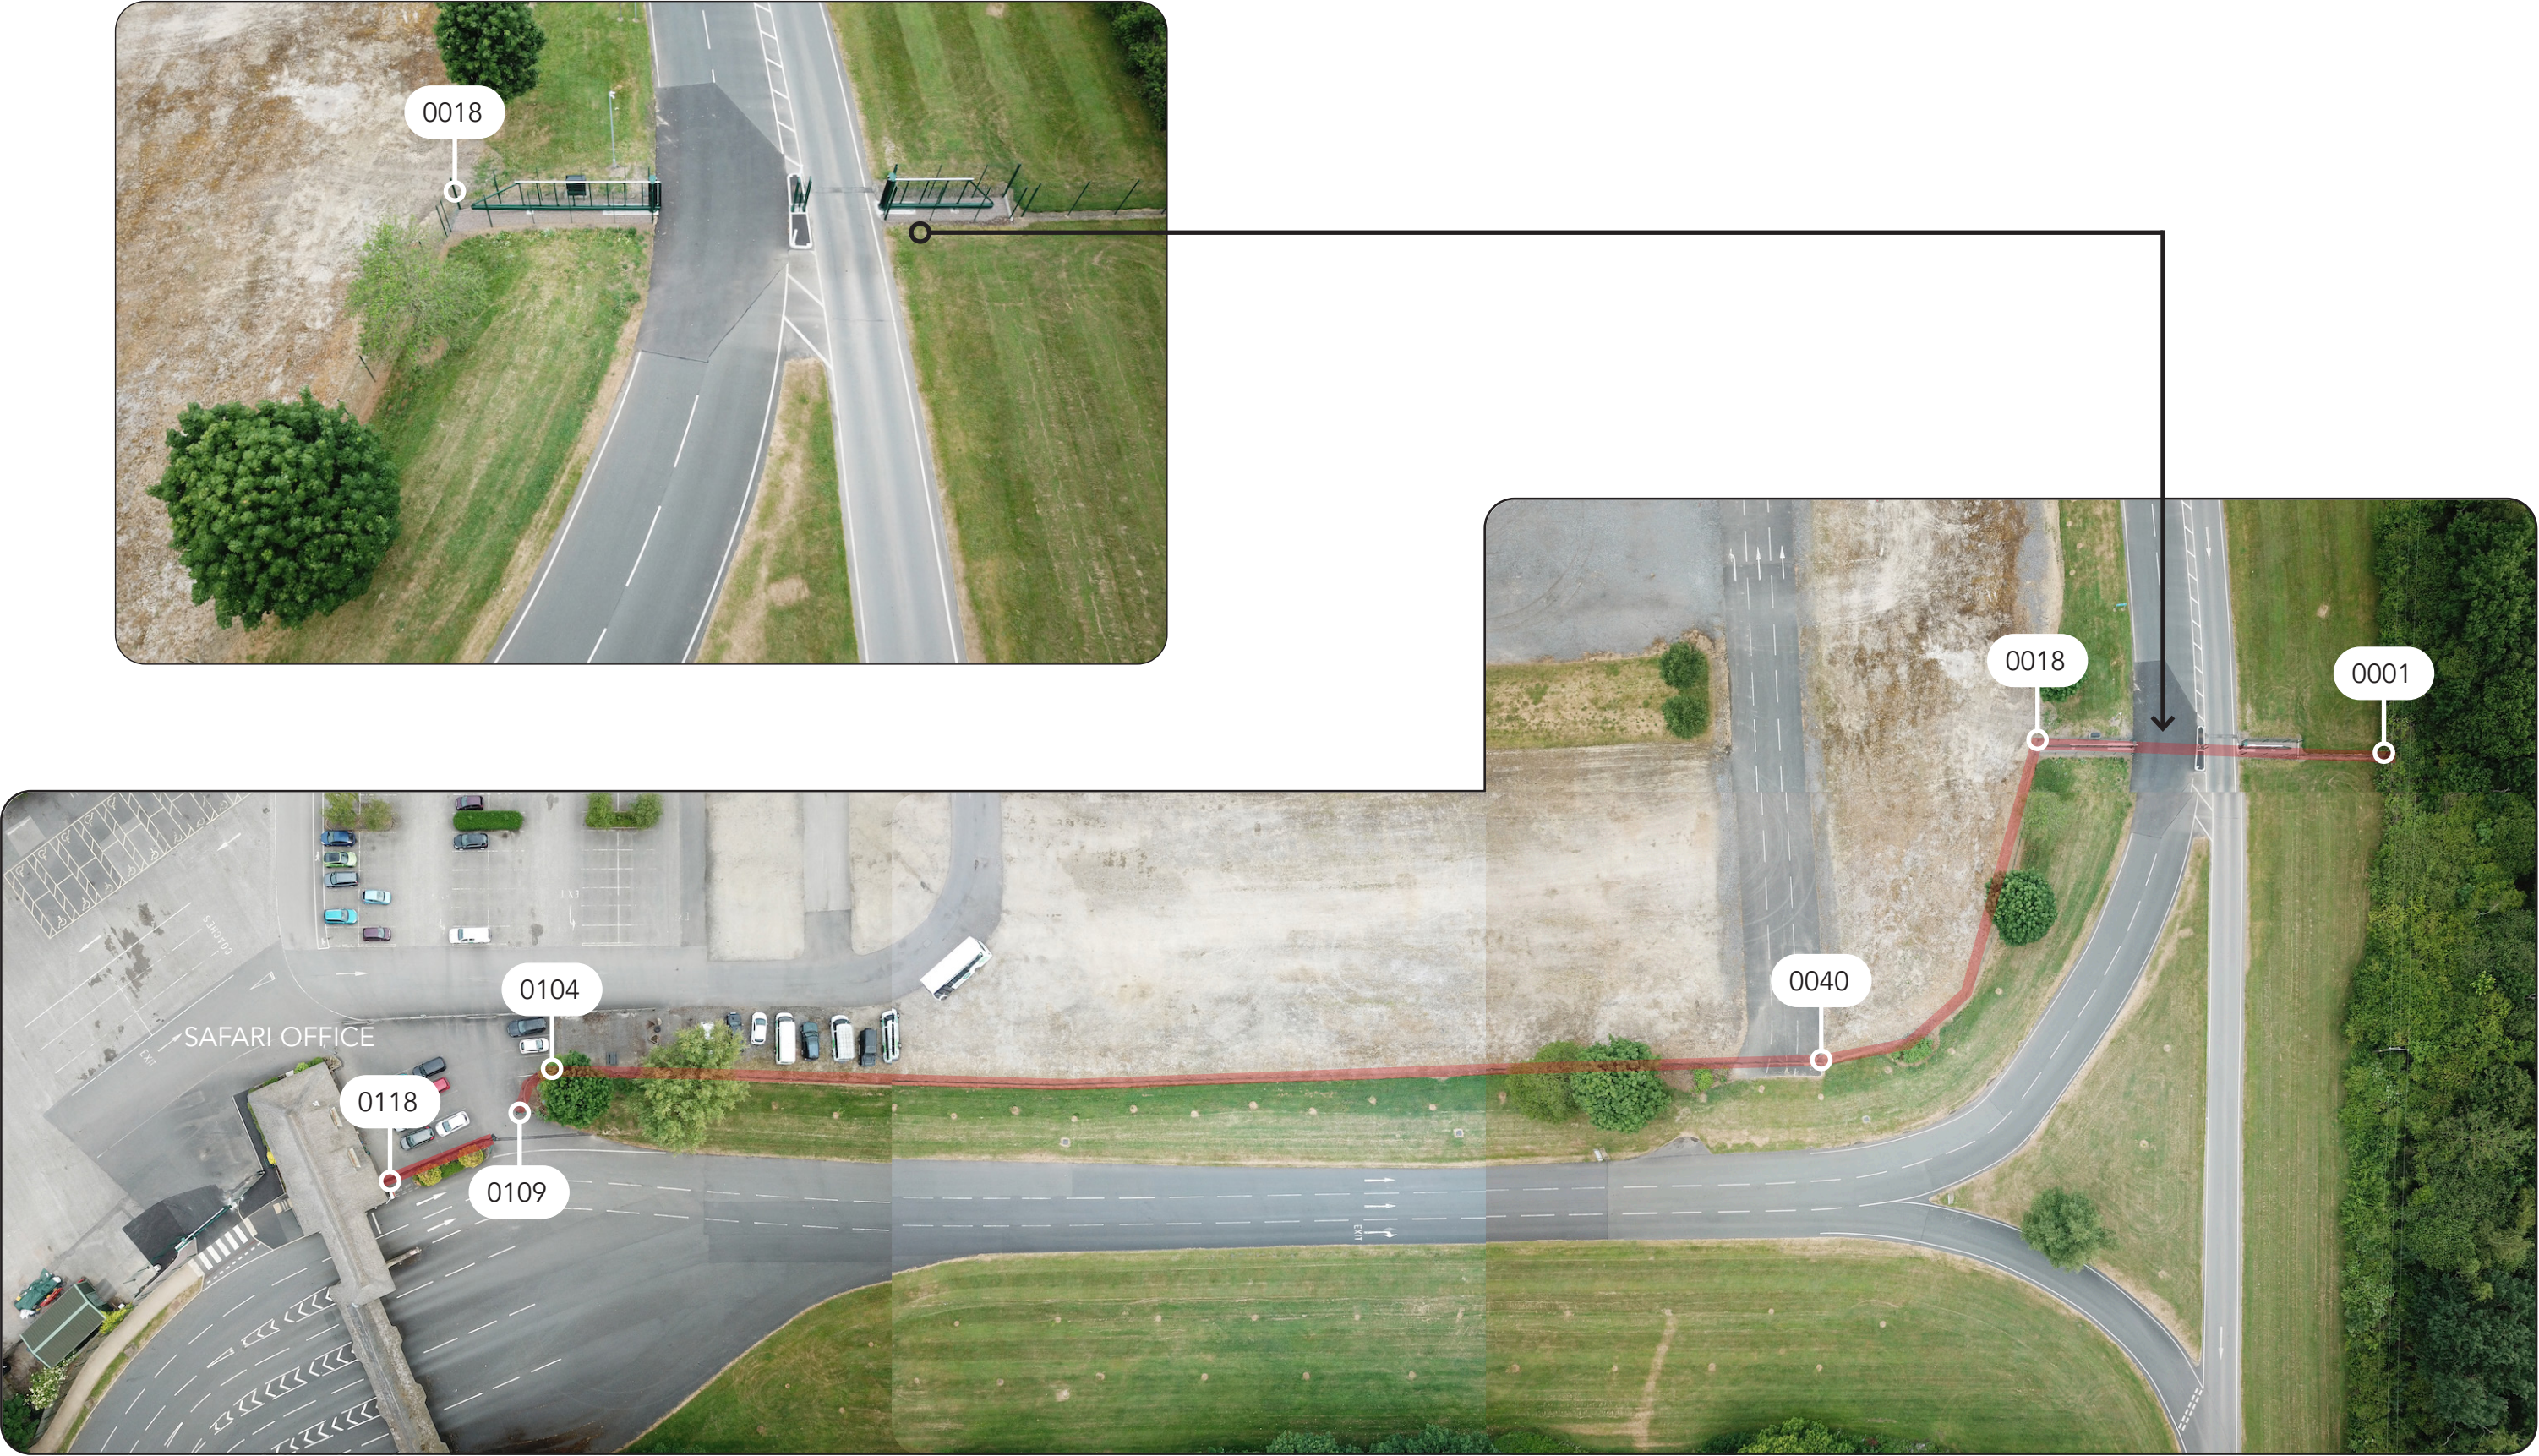

EXEMPLA PROFILED PANEL SYSTEM  
CLD FENCING SYSTEM

- Sections A to I.
- Panel height 2.8m installed but with land variation and some buried in the height range is 2.4-2.8m ground to top of fence panels.
- System has a fixed post (A) which on the front section (external) there is a clamp bar (B) which holds the individual panels in place (D). SafeTfix washer and bolt (C) hold the clamp in place.
- If the clamp bar is poorly installed (SafeTfix screws not inserted or fallen off) then the panels can move which further puts pressure on the clamp and the panel will fall out.
- In addition the system has various post designs for corners to allow the fence system to change direction, instead the installed fence at Knowsley simply uses the straight fence bars and places them next to the perpendicular fence line, this means that the strength of the fenceline is reduced.

POST AND DEER FENCE

- Section J only
- 2.4m high deer fence
- Section includes pedestrian gate
