4.10Mtr x 2.10Mtr Secure Zeus Cycle Shelter

Below is a 3-D visual of the style of Cycle Shelter I envisage for Davey's Chemist

Full Specification:

- 4.10Mtr x 2.10Mtr Secure Zeus Cycle Shelter to house ten cycles at any one time. This style of cycle shelter will be enclosed on three sides for maximum protection from the elements and vandalism, whilst the front portion utilises sliding gates for extra security.
- The main frame of the structure will be constructed from high grade 50.0mm x 50.0mm square hollow section with a fully galvanised and Durateal® powder coated finish. Most other companies only offer either galvanising OR polyester powder coating separately, which greatly reduces the lifespan of the cycle shelter and costs a great deal more. A wide range of colours are available to you.
- The glazing material for the main frame will consist of 5.0mm THK UV stable polycarbonate, which is both easy to maintain and also protects against harmful UV rays from the sun. The sliding gates will be glazed using 50.0mm square security mesh, not only for added security, but also to deter vandalism. We offer a hasp and staple locking mechanism with a coded padlock as standard.
- The front of the cycle shelter is the legally required 2100.0mm for head height purposes.
- Within the Cycle Shelter there will be our very own unique integrated five hoop cycle rack, which will house the desired ten cycles as requested. This system also reduces maintenance periods, as it is fixed to the rear of the cycle shelter and not the ground surface.
- The cycle shelter will either be resin anchor fixed onto the tarmac surface or sub-fixed into the ground using 400.0mm cubed concrete pockets. These methods are not only highly secure, but also quick and easy from an installation point of view, which will lower the amount of disturbance within your workplace.
