EXECUTIVE SUMMARY

Objective:	Phase 1 Desk Study / Preliminary Risk Assessment Report.
The Site:	Land between Ribblers Lane and Hedgecote, Kirkby.
The Proposal:	Construction of a new building.
Site History:	Appears to have always been open land.
Geology:	The site is underlain by recent superficial deposits overlying bedrock.
Conceptual Site Model:	No particular risks envisaged.
Hazard rating:	Low Risk
Recommendations:	Phase 2 Intrusive investigation required to assess the potential environmental risks, and to obtain geotechnical data for foundation design.

1.0 INTRODUCTION

1.1 Assignment and Scope of Work

On the instructions of Alex Halford, a Phase 1 Desk Study / Preliminary Risk Assessment report has been prepared by SEP Technical for the proposed development of land between Ribblers Lane and Hedgecote, Kirkby.

This report includes a review of existing geo-environmental information together with a study of former potentially contaminative land uses to allow the production of a Conceptual Site Model and Preliminary Risk Assessment in relation to the land and the proposed construction of a new plant room.

1.2 Site Location

The site is located on the north east side of Ribblers Lane, Kirkby at Grid Reference 341360,397130.

A more detailed review of site conditions is provided in section 3.1 of this report.

1.3 Proposed Development

It is understood that it is proposed to construct a two storey building with associated parking bays.

2.0 METHODOLOGY

This has been achieved by a detailed study of available information on:

- Soil and groundwater conditions within the general area of the site.
- Possible ground related geotechnical and contamination hazards within the site boundaries that may affect the proposed development.

The report also provides preliminary development recommendations and advice on further works required for a cost-effective reduction of risks to the development and procedures likely to satisfy regulators.

The report has been compiled with reference to the following guidance:

- Land contamination: risk management published by the Environment Agency April 2021.
- ISO 21365:2019 "Soil quality – Conceptual site model for potentially contaminated sites".

It should be noted that the Planning Authority when dealing with applications involving the re-development of land that may have past history of former potentially contaminated land uses will require a series of reports as listed below:

- Phase 1 Desk Study / Preliminary Risk Assessment.
- Phase 2 Intrusive Investigation and revised Preliminary Risk Assessment.
- Phase 3 Remediation Strategy.
- Phase 4 Verification Report

3.0 SITE CHARACTERISATION

3.1 Walkover Survey

A detailed walkover survey was carried out on 23rd February 2023.

The site is relatively flat and comprises a narrow strip of undeveloped land directly adjacent to Ribblers Lane and Hedgecote.

It is surrounded by mature trees and covered by overgrown vegetation and occasional trees.

There is no visible evidence that the site is contaminated in any way.

Significant factors identified at this stage

As trees are present on the site, if the land is underlain by clay soils the potential effects of shrinkage / swelling of the foundation materials must be considered.

3.2 Historical Summary

In order to establish a history of land uses at and adjacent to the site an Envirocheck Report was obtained from the Landmark Information group dated 12th February 2023.

This report includes a full set of historical plans of the area from 1893 to the present day at various scales and a summary of this information is presented on the following table.

It should be noted that the historical maps do not provide a comprehensive site history but only a source of snapshots in time and that between map dates there could have been transient land uses which have not been recorded.

In addition, not all of the uses are recorded on the maps for example small unmarked buildings.

Anecdotal information can often be a source of useful detail and if more specific particulars are needed, reference may be made to relevant trade directories.

MAP	SCALE	THE SITE	ADJACENT AREAS
Lancashire and Furness Published 1893	1:2500	The site is shown as open land.	Sefton Arms Cottages to the northwest of the site on the northeast side of Ribblers Lane and development opposite the site on the southwest of Ribblers Lane including a pair of cottages and two pond areas.
Lancashire and Furness Published 1908	1:2500	No significant changes	No significant changes other than a Nursery is shown on the southwest side of Ribblers Lane beyond the two pond areas.

Lancashire and Furness Published 1927	1:2500	No significant changes	No significant changes
Ordnance Survey Published 1959	1:2500	No significant changes	No significant changes other than the Nursery is not now shown with only a single pond on the southwest side of Ribblers Lane. Residential housing is shown to the northeast of the site but still separated by open land.
Ordnance Survey Published 1974	1:1250	No significant changes	The pond area on the southwest of Ribblers Lane is no longer shown. The housing development to the northeast of the site has been extended such that Hedgocote forms the directly adjacent boundary of on this side of the site.
Ordnance Survey Published 1993	1:1250	No significant changes	No significant changes

In summary, the site has not been subject to any previous uses and has always been shown as open undeveloped land.

Significant factors identified on historical plans

No evidence that the site should be underlain by made ground with the potential for ground contamination.

3.3 Geology and Anticipated Ground Conditions

Information published by the British Geological Survey suggests the site is underlain by rocks of the Chester Formation of Triassic age, with a surface covering of Shirdley Hill Formation of the Quaternary age.

There are no available close boreholes around the site that could indicate the thickness of the Shirdley Hill Sand and if this deposit is underlain by glacial till or rests directly on sandstone bedrock.

Significant factors identified from BGS information

On the assumption that there is no made ground across the site it is likely that the development can be supported by shallow strip footings.

3.4 Ground Stability

The site is not within an area affected by any potential hazards due to ground instability for example any collapsible / compressible ground.

Significant ground stability risks

None anticipated at this stage

3.5 Hydrology

The nearest significant surface water feature is in excess of 150m from the site and as a consequence the Environment Agency have no records of:

- Discharge consents
- Pollution incidents
- Licensed abstractions

with respect to surface water in close proximity to the site.

In terms of flood risk, the area of the site has been classified as of very low risk for flooding from rivers or seas, but is designated as potentially affected as low risk for flooding to occur due to surface water.

The site is shown as of limited potential for groundwater flooding to occur.

However, such flooding could only occur if permeable soils were present at or close to existing ground level within which groundwater could collect and the water table rise in adverse weather conditions.

In this case as it is anticipated that the site is likely to be underlain by the Shirdley Hill Sands the possibility for such flooding is evident

Significant factors from hydrological / flood risk factors

It is recommended that a detailed flood risk assessment is carried out for the site.

3.6 Hydrogeology

The overall hydrogeology of the site and the general area is shown on a series of maps provided by the Environment Agency which indicate:

- Bedrock is classified as a Principal Aquifer.
- The superficial deposits are classified as Secondary Aquifer A
- Groundwater vulnerability of the site is classified as High.

In theory it could be argued that if the land was underlain by significantly contaminated made ground then leaching could potentially affect the quality of groundwater.

However, at this stage there is not any indication that the ground beneath the site should be affected by significant ground contamination and in this situation any potential leaching should be restricted severely thereby resulting in only negligible effects on the quality of groundwater in the underlying aquifers.

Furthermore, there are no licensed groundwater abstractions or pollution incidents to affect the quality of groundwater in the vicinity of the site.

Significant factors from hydrogeological data
--

Negligible risk to the quality of groundwater.

3.7 Hazardous Ground Gases

Radon is a gas formed by the radioactive decay of small amounts of uranium that occur naturally in all soils and rocks.

However, significant volumes of this gas are only produced in areas underlain by particular rock types not present in this area.

As a consequence, the site is not classified as in an area requiring protection against radon and any new buildings will not require the inclusion of any specific protective measures.

Other harmful gases may occur due to anthropogenic activities such as disposing of biodegradable wastes by landfilling.

Methane and carbon dioxide in particular are generated by the biodegradation of waste materials which are normally deposited at landfill sites and in certain conditions these hazardous gases can migrate laterally to affect land well beyond the actual landfill itself.

In this particular case there are no recorded historic landfill sites or backfilled mineral workings within close proximity to the site.

However, the old pond feature noted on the historical plans on the southwest side of Ribblers Lane has been classified as potentially infilled land but there is no evidence to suggest that this was backfilled with bio-degradable material capable of producing hazardous gases that could have migrated to affect the development site.

Significant risks identified
No potential risks envisaged at this stage.

3.8 Unexploded Ordnance

As can be seen on the Unexploded Bomb Risk Map in **Appendix B** the site lies within an area shown as low risk from encountering Unexploded Ordnance so no further action is necessary at this stage.

Significant risks from UXO
Site classified as Low Risk

3.9 Other

The following topics have not been researched at this stage

- Archaeology
- Invasive Plants
- Ecology

4.0 CONCEPTUAL SITE MODEL AND PRELIMINARY RISK ASSESSMENT

Using the information gathered to allow compilation of this report and discussed in Section 3.0 above, a Conceptual Site Model has been prepared using the Source – Pathway – Receptor methodology as shown on the following table.

This methodology applies to potential contaminants in all three phases namely solid, liquid or gaseous.

As a starting point, there must be an identifiable SOURCE of contamination which:

- In its solid form could cause problems to human health.
- If subject to leaching could potentially result in contaminated groundwater.
- If containing a proportion of biodegradable materials could result in the production of hazardous gases.

On the assumption that a source has been identified there must be a credible PATHWAY for the contamination to affect any designated RECEPTOR.

Consequently, the following potential pathways and receptors have been identified:

- Construction workers could be exposed to potentially contaminated made ground by dermal contact, inhalation, or ingestion.
- Contaminants within the made ground could be mobilised by leaching and potentially affect the quality of both surface and underground waters.
- If any hazardous gases are present in the ground these would need appropriate control in the construction of any new buildings with the incorporation of precautionary measures to protect site users from possible explosions and / or asphyxiation,

For there to be an identifiable risk then there must be clear linkage between each part of the chain otherwise there is no risk.

In terms of the potential ground contaminants that may affect a site, these include a common range of substances including metals, polycyclic aromatic hydrocarbons, speciated TPH's, and Asbestos.

SOURCE	PATHWAY	RECEPTOR	RISK ASSESSMENT	LINKAGE
Contaminants in made ground including metals, PAHs TPHs and Asbestos	Ingestion / dermal contact / inhalation	Current site users	As significant ground contamination is not anticipated at the site it is considered there are no potential risks to current users.	Not Viable
		Construction workers	As ground contamination is not anticipated at the site there are no potential risks to construction workers but if any made ground is found this will need to be considered as potentially contaminated.	Only Potentially Viable
		Site users after re-development	The development proposals includes garden areas which will need appropriate treatment if any	Only Potentially Viable

			contaminated made ground is found.	
		Adjacent Land users	Assuming appropriate practices such as wheel washing of vehicles in / off site and dust control are taken any significant risks are considered to be minimal.	Not Viable
	Uptake in root zone	Plants	The development proposals includes garden areas which will need appropriate treatment if any contaminated made ground is found.	Only Potentially Viable
Mobile contaminants in made ground including metals and PAHs	Leaching from made ground	Groundwater	Despite the site being underlain by aquifers with high vulnerability, the anticipated made ground at the site results in a negligible risk to the quality of groundwater at this stage.	Only Potentially Viable
	Off-site migration in groundwater	Surface Water	No nearby adjacent surface water courses	Not Viable
Hazardous vapours from volatile contaminants	Inhalation of vapours	Current site users	No reason to anticipate any problems from this source.	Not Viable
		Construction workers		
		Site Users after re-development		
		Adjacent users		
Landfill gases from the made ground	Emissions from the ground collecting in excavations / confined spaces on / off site.	Current site users	No reason to anticipate any problems from this source.	Not Viable
		Construction workers		
		Site Users after re-development		
		Adjacent land users		
Radon	Emissions from the ground	Construction workers	The site is in an area where no specific radon protective measures are required in the construction of new buildings.	Not Viable
		Site users after re-development		

Ground conditions aggressive to buried concrete	Direct contact	Underground structures	Buried concrete will need appropriate protection from aggressive ground conditions	Viable
Ground instability	Differential settlements	Structures	No reason to anticipate any problems from this source.	Not Viable.

From a study of the Conceptual Site Model it appears that in the presumed absence of any potentially contaminated made ground at the site then the only viable risk is the protection of concrete within the ground due to aggressive ground conditions.

However, if made ground is encountered then there could be potential viable risks concerning the safety of construction workers, possible treatment of garden areas and the quality of groundwater which will all require further assessment.

5.0 FURTHER INVESTIGATION

A Phase 2 Intrusive Investigation will be required to gather information on:

- The degree of contamination of any made ground proved at the site and / or the topsoil if suitable for reuse.
- Geotechnical properties of the underlying superficial deposits.

It is anticipated that this will be achieved by sinking a number of window sampler boreholes across the site with appropriate in-situ testing and soil sampling to ensure sufficient information is obtained for foundation design.

6.0 SUMMARY AND RECOMMENDATIONS

The Phase 1 study has established that the site has always been recorded as open land.

A Phase 2 Ground Investigation will be required to produce a revised risk assessment as appropriate, and information on foundation design.

As noted previously a Phase 3 Remediation Strategy and Phase 4 Verification Report will be produced at the appropriate time.

This report should not be considered to be exhaustive and any opinions only relate to the purpose for which the report was commissioned. It should be noted any risks identified in this report must be regarded as perceived risks and based purely on the information reviewed, and it must also be noted that the actual risks at the site can only be assigned after the completion of the Phase 2 Intrusive Investigation report has been completed.

Published 1928

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Liverpool

Published 1974

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2022

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

APPENDIX B UNEXPLODED BOMB RISK MAP

UNEXPLODED BOMB RISK MAP

SITE LOCATION

Map Centre: 341351,397134

LEGEND

- High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- Low:** Areas indicated as having 15 bombs per 1000acre or less.

- military**
- industry**
- UXO find**
- transport**
- dock**
- Luftwaffe targets**
- utilities**
- Bombing decoy**
- other**

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: (<https://zeticauxo.com/downloads-and-resources/risk-maps/>)

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

APPENDIX C GENERAL REPORTING CONDITIONS

The sole purpose of this report and the associated services performed by SEP Technical is to undertake a Phase 1 Desk Study / Preliminary Risk Assessment for the site at Ribblers Lane, Kirkby in accordance with the scope of services set out in the agreement between SEP Technical and the Client.

In preparing this report, SEP Technical has relied upon, and presumed accurate, any information (or confirmation of the absence thereof) provided by the Client. Except as otherwise stated in the report, SEP Technical has not attempted to verify the accuracy or completeness of any such information. If the information is subsequently determined to be false, inaccurate or incomplete then it is possible that our observations and conclusions as expressed in this report may change.

The opinions contained within this report have been derived by the finite data on which they are based and are relevant only to the purpose for which the report was commissioned.

SEP Technical derived the data in this report from information sourced from the Client and available in the public domain at the time or times outlined in this report. The passage of time, manifestation of latent conditions or impacts of future events may require further examination of the risk assessment, findings, observations and conclusions expressed in this report. SEP Technical has prepared this report in accordance with the usual care and thoroughness of the consulting profession, for the sole purpose described above and by reference to applicable standards, guidelines, procedures and practices at the date of issue of this report. For the reasons outlined above, however, no other warranty or guarantee, whether expressed or implied, is made as to the assessment, observations and findings expressed in this report, to the extent permitted by law.

This report should be read in full and no excerpts are to be taken as representative of the findings. No responsibility is accepted by SEP Technical for use of any part of this report in any other context.

The report should not be considered to be exhaustive, and any opinions only relate to the purpose for which the report was commissioned.

It should be noted any risks identified in this Phase 1 Report are and must be regarded as perceived risks and based purely on the information reviewed, and it must also be noted that the actual risks at the site can only be assigned after the completion of the Phase 2 Intrusive Investigation report has been completed

This report has been prepared on behalf of, and for the exclusive use of the Client, and is subject to, and issued in accordance with, the provisions of the agreement between SEP Technical and the Client.

SEP Technical accepts no liability or responsibility whatsoever for, or in respect of, any use of, or reliance upon, this report by any third party.

SEP TECHNICAL

Part of the  SEP group of companies

SEP ENGINEERS

Providing engineers and expert setting out, quality assurance and as-built survey services since 1986.

 01695 729835

SEP GEOSPATIAL

Specialists in the sale, hire and service of industry-standard surveying and engineering equipment.

 01695 50658

SEP TECHNICAL

Offering a range of technical services such as ground investigation, concrete scanning and material testing.

 01695 729835

SEP SUBSURFACE

Hire, sales and service of the best solutions for detection and recording of all things buried or hidden.
