Hello Lee,

All of the plumbing inside the house is located towards the front of the house. The back just contains two bedrooms and a living room.

Also the ASHP requires a heavy duty electrical feed over and above the normal household supply and the main power board is located in the porch. (This has already been updated by SSE)

The existing boiler is located in a cupboard next to the bathroom on the first floor at the front and this is being replaced by a cylinder storage tank that the ASHP will connect to from outside. All existing plumbing for radiators etc is fed from this cupboard and all the radiators exist on the central plane of the house, the cylinder storage tank feeds the radiators and all other plumbing.

My understanding is that the ASHP produces noise at around 40 decibels at around 1 meter away.

I confirm the extension to the 24th May.

Regards
Norman Hind

Hello Norman

I have received the comments of Environmental Health, and they are requesting that a noise assessment is undertaken and submitted. However, if you can let me know why the ASHP needs to go on the front (you did say something about the way the house was laid out internally so please expand on this) this

will not be required. Please email the explanation to me and I will upload it. Please also confirm an extension of time to Friday 24 May on the same email (it may well be decided before then).

Thank you

Lee
