

36 Wilson Road. Transport Statement

As we convert the restaurant with a focus on serving our local community and neighbouring businesses, we believe that providing only bicycle storage, instead of car parking, is the most appropriate choice. Here's why:

Sustainable transportation: By encouraging customers to use bicycles, we actively promote environmentally friendly and sustainable transportation options. This aligns with our commitment to reducing carbon emissions and minimizing our ecological footprint.

Reduced congestion: Eliminating car parking spaces helps to alleviate traffic congestion in the area. By prioritizing bicycles, we contribute to a smoother flow of traffic, making it easier for everyone, including pedestrians, to navigate and access our establishment.

Health and well-being: Encouraging cycling promotes physical activity and supports a healthier lifestyle for our customers. By providing secure bicycle storage, we aim to create an environment that fosters a culture of wellness and active living.

Local community integration: With a focus on serving our local community and businesses, we recognize that many of our customers work nearby. By emphasizing bicycle storage, we cater to the preferences and needs of our community members who are more likely to choose active transportation methods for shorter distances.

Space optimization: Utilizing the available area for bicycle storage instead of car parking allows us to maximize the use of our premises. This enables us to create a more inviting and vibrant atmosphere for our customers, enhancing their overall dining experience.

In conclusion, opting for bicycle storage instead of car parking aligns with our values of sustainability, community integration, and promoting a healthier lifestyle. We believe this decision will contribute positively to the well-being of our customers and the local area as a whole.
