Revision	Description	Date
1	First Issue	Apr 25
2	Amended Layout	Jun 25

Car Park Existing layout:

Front Car Park area:

Total 41Nr Spaces based on car space dimensions 5.0 x 2.4m

Standard access dimensions for 2 way access should be 6m, the right hand side is only 5m.

Car parking spaces based on 2.4m width is tight for modern vehicles.

Noted hatched area to the north of the front parking area, need to understand if this restriction has a reason.

Unknown use of access and egress from front car park, so assumed that one is entry and the other is to exit.

Rear Car Park Area:
Total 30r Spaces. Car space dimensions approx. 5 x 2.4m plus 2 disabled and 2 minibus spaces

Need to understand how the controlled gates are used and whether these can be modified.

To the rear parking area there is a turning space at the end of the car park, this does not appear to give the ability to turnaround without needing to reverse, it also appears that the space required for this is not available.

Need to understand if there are any statutory / service / regulation restrictions to inform the proposals.
